Text analysis looks at special characters or characters outside the language of the work, unrecognized words, a passage of a different style, and the length of words in the examined work. Particular attention should be paid to the graph of word length distribution (purple color) and doubts should be raised by high values on the scale at the beginning and at the end of the graph.
  - b) Overall results, which determine an indicator called Percent Similarity Size (PRP). The Percent Similarity Size presents the level of similarity from all reference bases. The result is presented by four blocks and was determined for phrase values of 5,10, 20 and 40 words in the shortest passage considered.

$$\text{PRP} = \frac{Y}{X} \times 100\%, \text{ where:}$$

Y - the number of characters from all similar fragments,  
 X - The number of total characters in the examined work.

- c) The reference comparison databases specify the PRPs for the fragments found in the various comparison databases (ORPPD, Internet, Act Database, University Database) along with their sources.
8. JSA presents PRP values in three colors: green, orange and red, which correspond to the set tolerance level of each indicator. Next to each source, the length of the longest similar passage and the number of phrases calculated for each PRP are shown.
  - a) **The green** color indicates that the similarity scale does not exceed the tolerance level.
  - b) **The orange** color indicates that the tolerance level has been exceeded - the PRP value is elevated and it is *recommended* to check the details of the results in the body of the work.
  - c) **Red** color means that the tolerance level and the warning level of increased tolerance have been exceeded, the PRP value is high and it is *necessary to* check the details of the result in the body of work.
9. In each case, before generating the report, open the text analysis section and verify the borrowing marks and evaluate the PRP value for each block. In a justified situation, the borrowings should be excluded from the result, along with the reason for the exclusion. The comments added during the verification of borrowings will appear on the Report automatically.
10. If manipulation is found on the text hindering the anti-plagiarism examination, the work may be withdrawn for improvement within the deadline set by the promoter.
11. In a situation where the student has provided another (revised) version of the paper, it should be added as another sample under the previous study.
12. The promoter can decide whether to admit or reject the thesis, generates the final report in pdf format and then accepts it and delivers it to the dean's office signed via trusted signature or qualified signature.
13. If, as a result of the visual inspection of the Report on the result of the study, the work is considered as independent, the promoter in the conclusions of the Report unchecks the checkbox indicating, that the work does not indicate significant similarities and requests that it be admitted to the defense.

14. If the promoter's opinion indicates that the work, despite exceeding the permissible value of coefficients, does not contain impermissible borrowings, such work is considered shall be considered qualified for defense.
15. If it is found that the thesis contains unauthorized borrowings, the promoter requests that the disciplinary committee investigate the case of the found borrowings. The thesis shall not be admitted to defense and against its author, within 14 days from the date of transmission of information, the Rector shall initiate an investigation. The investigation proceedings shall be conducted in accordance with the procedure set forth in Article 287, paragraph 2, items 1)-5) of the Law,
